Optional power supply now available with B&D Portable Align Boring Machines

With the development of the GB-2300 Electric Gear Drive, you can easily convert your existing hydraulic units in the AM1424 and TM series to belt driven variable speed electric power.

This additional option has added to our already existing features of portability, versatility and reliability.

Completely variable speeds

Choose from our high-speed model (24-238 rpm) or for increased torque our slower speed model (12-120 rpm)

Don't delay, get your GB-2300 Electric Gear Drive and bring these benefits to your production operation:

- Portability
- Complete variable speed
- Easy to attach
- Light-weight
- Multiple positioning on drive head
- When the repair situation has its restrictions you now have a different option

Time saving option - Self-Centering Mount

Now available for all B&D Portable Align Boring Machines is the SCM-2300 Self-Centering Mount.

Using a spherical ball in the machine mount, this innovative option will greatly simplify the alignment process of the boring bar. It easily adapts to our existing Portable Align Boring Machines. In addition, the drive is no longer required in the initial set up operation.

This means you will save time and as a result money.
